## **Encryption Controls Vital to Protecting American Technology Featured on Science News Radio**

*Upcoming seminars by the International Trade Center (Small Business Development) will also answer licensing questions*

Dallas, Texas, Jan. 26, 2009. Lorraine McCord, Director of the International Trade Center, a government agency located in Dallas, Texas, says the US is increasingly vigilant to prevent the loss of our trade secrets. For these reasons our important import-export commerce can be adversely affected when firms do not know the rules.

Ms. McCord made her comments while recording for a radio program to be aired Sunday, February 1. Her comments feature the importance of protecting US technology secrets in an ever shrinking world.

The radio program, *The Promise of Tomorrow* with Colonel Mason, is aired in Dallas and Fort Worth with a possible audience of over two million, then archived on the Web to an audience that is world-wide. McCord will explain how the International Trade Center works and how it has vital information for small businesses planning to develop viable export/import avenues. The International Trade Center has scheduled two seminars on the subjects of Licensing Requirements and Encryption Controls to be held in Dallas February 24-26. More information on the seminars can be found at [www.iexportimport.com](http://www.iexportimport.com).

The radio program on which McCord will make her comments studies the commercial business of emerging science and nanotechnology, and has a history of keeping abreast of breaking commercial advances, all archived at the program's website. During the month of January alone topics have included views on how the people of Taiwan really see themselves as mainland Chinese, despite opinions otherwise in the US; targeting cancer tumors with nanotechnology and colloidal gold; how thin films in nanotechnology are important to US defense; why government has not had the reasons to resolve an energy policy; nanotechnology with Lab-on-a-Chip in medicine, clothing, cosmetics; how MANCEF conferences created \$2Billion for new firms; new nanotech markets with a world scope; starting a world class business in a garage and how it was done.

"February is lining up to be another exciting and informative month," said Colonel Mason, the program's creator and host, "we see startling revelations that will affect mankind on every level. Like this month the program will reveal the roadmap on how we will get off fossil fuels almost entirely in 20 to 30 years with a crash Apollo-like program," said Mason, "drastically slowing global warming and ensuring dramatic economic growth around the world, a pretty comforting thought in these current times."

**About *The Promise of Tomorrow* radio program:**

The award-winning creator and host of the program is veteran news reporter, Colonel Mason. This past year featured reports on how nanotechnology has led to human gum regeneration; nanotechnology in Iran, Singapore, China, Israel, and around the world; how nanotech coatings bring protection from graffiti; how Texas is funding new firms in emerging technologies.

Other important topics covered include biodegradable plastics; atomic manipulation and building things with atomic precision for practical uses; medicine; nerve regeneration, human tissue interfacing with bionics; artificial muscles; the fallacy of BioFuels; targeting cancer tumors with nanotechnology and colloidal gold based compounds administered directly at the site of the disease while not affecting other organs; water purification using nanotechnology; how hydrogen is abundant and easy to collect and (in solid form) the next fuel needed to replace gasoline, jet fuel, and generate electricity; plus views from scientific living legends and Nobel Laureates.

The hour long program is a wealth of information each week, also featuring headline news in emerging science, the latest tiny tech jobs, and what has become the very popular *Voice of Reason*. It is aired each Sunday from 7 to 8 pm on KMNY 1360AM radio [www.RationalRadio.org](http://www.RationalRadio.org), then promptly archived on the Web where its content is consumed world-wide at [www.PromiseOfTomorrow.biz](http://www.PromiseOfTomorrow.biz). Colonel Mason welcomes suggestions on topics and/or guests. Email to [colonel@prfirm1.com](mailto:colonel@prfirm1.com) or contact directly by phone at 214.329.4949
